

Safety related Tree felling list, November 2024

St Albans City & District Council carry out a three-year cycle of safety surveys

Sometimes it is necessary to remove trees that are dead, dying, diseased or have significant structural weaknesses. When the trees are felled, usually the stumps are left in-situ at about a metre high so they are clearly visible. The stumps are then ground. Before any work starts the contractor will check each tree for nesting birds. If active nests are present the work will be postponed if it is safe to do so.
